

MAPS Core Conservative Portfolio

The Morgan Stanley Wealth Management MAPS (Multi-Asset Portfolio Solutions) Core Conservative Portfolio is an actively-managed diversified portfolio that invests in a broad range of managed funds and exchange traded funds.

Who is this portfolio suitable for?

Morgan Stanley Wealth Management Australia has designed this portfolio to be suitable for investors who have a conservative risk profile and are looking for a portfolio with a mix of growth and defensive assets. It is suitable for investors who can tolerate several quarters of lower returns relative to a higher risk tolerance portfolio through different phases in a market cycle (see Risks section on page 5). The portfolio has a core strategic asset allocation range of 8%-32% in growth assets and 68%-92% in defensive assets.

Performance

Note: The MAPS Core Conservative Portfolio is based on the Core Conservative model published by the Morgan Stanley Wealth Management Research team. Past performance may not be indicative of future results.

Market Commentary

December saw the S&P/ASX 200 Accumulation Index add a further 2.7% to end 2021 with a calendar year total return of 17.2%. The calendar year saw strong contributions from the barbell of financials and materials while technology was the only sector to see negative returns. December saw a return of Value outperformance against a backdrop of another wave of Covid disruption.

In overseas markets, 2021 marked the third consecutive year in which US stocks posted an annual total return above 15%, with the S&P 500 Index returning 28.7% in local terms (36.1% in AUD). There has been only one other such three year period since 1929. By sector, US energy and real estate stocks outperformed, and European banks had their best year since 2009.

However, outside of the notably strong performance of these markets, most other equity regions and asset classes struggled to outpace inflation for the year. Japanese and Emerging Market equities underperformed sharply over the year with the Nikkei 225 Index and the MSCI Emerging Markets Index posting total returns of 1.3% and 3.0% (in AUD) respectively.

During December the Federal Open Market Committee (FOMC) meeting tone was overwhelmingly towards more restrictive monetary policy as evidenced by the indicated accelerated tapering of asset purchases to finish in March 2022 and the option to hike rates for the first time since 2018. In Europe, the Bank of England raised the cash rate in December despite Omicron uncertainties, guided by a clear focus on the medium-term inflation outlook. The European Central Bank announced plans to exit pandemic support. Purchasing Managers' Index (PMI) data in December seemed to support these views with both the UK and Euro Area PMIs remaining in expansion territory despite modest misses reflecting the current Covid wave and associated uncertainty.

Commodities were also strong in 2021, with the Bloomberg Commodities Index seeing its best year since the 1970s. The S&P GSCI sub-indices for Energy (+69.9% in AUD), Industrial Metals (+37.1% in AUD) and Agriculture (+31.8% in AUD) all showed strong returns, with only the Precious Metals subset showing weak returns (0.3% in AUD).

Developed Market High Yield gross issuance was up +25% YoY, while Investment Grade gross issuance fell back in line with prior years after an exceptional 2020. Uncertainty moderated throughout the year with the CBOE VIX volatility index peaking at 37% in January of 2021 and ending the year at 17%.

Benchmark

The Investment Solutions team sets the benchmark for the MAPS Core Conservative Portfolio by referring to analysis generated by the Wealth Management Research team.

The portfolio has a dual benchmark. A real return benchmark (i.e. targeting a premium over inflation) with an appropriate indicative time horizon for realisation; and a relative return objective, allowing investors to measure portfolio performance against the median comparable multi-asset portfolio in Australia.

Portfolio Risk Profile	Real Return Objective	Relative Return Objective
Conservative	CPI + 2.0%	Morningstar Australia Fund Multisector Conservative Category Average
Balanced	CPI + 3.0%	Morningstar Australia Fund Multisector Balanced Category Average
Growth	CPI + 4.5%	Morningstar Australia Fund Multisector Aggressive Category Average

Risks

Investors should note that an investment in the portfolio through Morgan Stanley's Separately Managed Account (SMA) involves risk, including:

Market risk - The risk associated with factors that can influence the direction and volatility of an overall market, or security-specific risks. These factors can affect one country or a number of countries.

International investments risk - The risk arising from political and economic uncertainties, interest rate movements and differences in regulatory supervision associated with international investments.

Currency risk - Currency exchange rate fluctuation risk arising from investing across multiple countries.

Interest rate risk - The risk arising from movements in interest rates which may cause the price of securities within the portfolio to fluctuate.

Credit risk - The risk of an issuing entity defaulting on its obligation to pay interest/principal when due.

Liquidity risk - The risk that an asset may not be converted to cash in a timely manner.

Counterparty risk - The risk of another party to a transaction failing to meet its obligations.

Leverage risk - Where underlying investments contain leverage, the movement in market prices may magnify the gains or losses within the portfolio. This may result in a loss of capital.

Investors should consider the relevant product disclosure statement or offer document (where available) for other risks that may apply.
